CONSIS ENGINEERING PTE LTD

About Us

Consis Engineering

Consis Engineering Pte Ltd is a trusted name in Build Construction and Landscape industry, having built a solid reputation for quality work and service over the past few decades.

Consis Vertical Greenery System (Consis VGS)

In 2006, the Consis Vertical Greenery System unveiled to the public at the Singapore Garden Festival, and has been the company's flagship product ever since.

Over the years, Consis VGS has garnered a faithful following among architects, landscape architects and other clients for its winning features – easy installation, immediate results (also referred to as "instant greenery"), high durability, low maintenance and most importantly, an unmatched level of customisation to perfect suit each client's unique needs.

Our proven system is fully integrated with automatic irrigation, drainage and fertilisation functions for a holistic ecology, ideal for plants to grow and thrive. Our satisfied clients both locally and overseas will attest to the unrivalled benefits of Consis VGS.

Consis Vertical Greenery Solution

Consis Engineering

Consis Engineering specialises in creating inspirations of nature with vertical greening solutions.

With decades of experience behind us, and the award-winning Consis Vertical Greenery System (Consis VGS), we are confident of bringing your vertical gardens to life – in ways that will captivate the hearts and minds of your visitors, while being simple to maintain for years to come.

Benefits of Consis VGS

The innovative Consis VGS is the preferred vertical greenery solution among industry experts for a variety of reasons. Here's why:

- Durable structure that's built to last for decades
- Fuss-free maintenance, with an "individual pot system" so plants can be easily replaced
- Plants are grown naturally and vertically in pots (not horizontally on panels), giving foliage a realistic, natural look
- Consis VGS is an integrated greenery system with
 - o Irrigation, fertigation and drainage functions,
 - o Giving every plant its own water and fertiliser supply
 - o Saving water
 - o Ensuring different types of plants flourish with precisely the care they need

- "Instant Greenery" effect. Get 95% greenery coverage from day one, no need to wait months for plants to grow and "fill out" your green walls
- Fire resistant structure has a fire rating of US94-0, meeting building fire resistance requirements
- Maintenance and irrigation is customised to your building's specifications (our specialists will conduct feasibility studies to determine what's best for your environment)
- Looks gorgeous in both two-dimensional (i.e. flat) and three-dimensional structures

Other Vertical Greenery Systems

Alongside the Consis Vertical Greenery System, we also offer standard vertical greening solutions. If you'd prefer a traditional solution, or would like to know more about our other offerings, let us know and we'll be glad to help.

- Cassette System
- Planter System

Plant Selection

In addition to designing your green walls, our experts will also advise you on plant selections. These choices are based on a combination of:

- Aesthetics
- Environment
- Maintenance requirements

These recommendations are customised to your exact needs, so you'll always have great looking, green ecology that's simple and efficient to maintain.
